@psufka

The diagram illustrates a process for managing Claude's memory. On the left, a blue brain icon is labeled 'Claude's memory'. An arrow points from this brain to a central circular gauge labeled 'Context Compaction' which shows a '90%' completion. Another arrow points from the gauge to a box on the right labeled 'Long-Term Memory' containing 'Important Learnings'.

How to Make Claude Code Aware of Its Own Context Limit

2

4

399

Claude Code can show you how much context is remaining, but Claude itself can't see and act on that number unless you set up a way to keep it informed.

Towards shared minds

AI-native collaboration is here. Turn the traces of your team's work into persistent collective cognition.

```
npx create-egregore@latest --open
```

[See documentation](#)

Organizational cognition

Every session leaves a trace. Decisions, patterns, handoffs structured and ready to build on. Persistent context beyond individual sessions, compounding into institutional knowledge that any member human or AI can work with.

"A shared intelligence layer for teams using Claude Code. Persistent memory, async handoffs, and accumulated knowledge across sessions and people."

Every commit tells a story. Now you can read it.

Entire CLI hooks into your git workflow to capture AI agent sessions on every push. Sessions are indexed alongside commits, a searchable record of how code was written.

braindump - Agent Memory

Local, searchable notes that persist across conversations. Silently capture contextual information as longer-term memory that survives beyond the current session.

Manual triggers:

- **"use your brain"** or **"remember anything about..."** — search braindump for relevant context before performing the task
- **"braindump this"** or **"save this to memory"** — store the current context/information for later retrieval

Context Engineering with Threadlinking for Claude Code

Preserving Conversation Context and Decision History

MARIANNE

Dear Friends,

If you've followed me on X for a while, you might have seen me post about a context engineering tool I recently built for Claude Code called Threadlinking. A few people have asked for a write-up, so here it is.
